

Client summary data is compiled from data downloads from client CPAP machines. Figures shown are averages of ALL clients where data has been received (no exclusions). Leak data is a compilation of Litres Per Minute (LPM) and Max Leak, whichever is described in the client data. The data set is incomplete and other variables have not been controlled or accounted for. Despite this, the magnitude of change represented in the data is significant and supports the conclusion that the TrueFIT™ Custom Mask:

- (1) delivers a substantial reduction in extraneous leakage,
- (2) enables patients to wear the mask for longer periods each night, and as a result
- (3) delivers consistently improved therapy.

	Pre-TrueFIT	Post-TrueFIT	Change	Change %
AHI	4.4	2.2	(2.2)	(50%)
Compliance (hours)	5.5	6.2	0.7	13%
Leaks	38.8	10.3	(28.6)	(74%)
